

## ACCESSORIES

### THERMAL EDGE INTEGRATED ENCLOSURE HEAT PACKAGE

The Thermal Edge Integrated Enclosure Heat System is incorporated into the evaporator section of the air conditioner, thereby utilizing the evaporator blower for cooling or heating. Electric heating elements with thermal overloads are available in several ranges to suit most applications. The heater is controlled by our programmable, digital temperature controller. The controller has separate programmable upper and lower control limits for cooling and heating, and a programmable dead band to prevent simultaneous operation of heating and cooling. The temperature set points for cooling and heating are set at the factory and can be field adjusted in one degree increments. The temperature set points can be protected by keypad protection.

**Specifications:**

Voltage:	120 - 208/230
Watts	500, 1000, or 1500
Capacity, BTUH	1707 BTUH/3413 BTUH/5120 BTUH
Temperature Range	-99 to 302 degrees F
Dead band:	.1 to 20 degrees F
Accuracy	Better than .5% of scale
Resolution	.1 degree
Code Protection	4 digit, customer settable on request
