

UNIT FEATURES:

ON/OFF SWITCH

In compliance with UL Standard 484, all Thermal Edge Enclosure Air Conditioners will include the safety feature of an On/Off switch on the backside of our units facing into the electrical enclosure.

Please see the photo below for the location of this easy to use safety feature.

This switch provides a convenient way to turn the air conditioner off when entering the enclosure in order to prevent excessive condensation due to high ambient humidity.

The power switch should also be used to power down the air conditioner when performing field maintenance or repair.
