The standard spacing between the warm air return inlet and the cold air outlet on the bottom panel of the TM061 and TM081 top mount air conditioners is 20 inches. If your application will benefit from greater spacing due to the length of your enclosure and/or the placement of heat generating components, the Air Outlet Extension is available as an option when ordering the TM061 or TM081. This option will increase the spacing between the air inlet and air outlet to 30 inches.
